Education

Manipal Institute of Technology, BTech in Computer and Communications Engineering Sept 2022 – current

- **CGPA:** 9.53/10
- **Coursework:** OOP, Data Structures and Algorithms, Embedded Systems, Operating Systems, Database Management Systems, Big Data Analytics, Computer Networks, Deep Learning and Explainable AI
- **Minor Specialization:** Data Analytics

Experience

Data Engineering Intern, Eli Lilly and Company Jan 2026 – current

- Built a PDF Parser handling both native and scanned(OCR) documents, converting unstructured PDFs into structured JSON to make medical testing reports machine-readable for downstream pipelines and remove all the manual checks that need to be conducted on them. Extracts about 500 PDFs in around 35 mins.
- Cut Google Analytics data pipeline latency from 72hrs to 4hrs by building Airflow DAGs on AWS that ingested data across 280 websites, enabling near same day reporting for downstream teams.
- Built an agentic workflow that auto-generates DLT(data load tool) ingestion configs from a single API endpoint input, eliminating manual pipeline setup and reducing onboarding time for new data sources.

Research Intern, Samsung PRISM Dec 2024 – June 2025

- Engineered a VR avatar pipeline that generates expressive 3D facial models from a single 2D image.
- Applied photogrammetry, parametric face models (MICA, FLAME), and rigging tools (Meta's Aura Rig, WRAP3D, Blender, MeshRoom) to deliver high-fidelity, emotion-capable avatars.

Full Stack Developer Intern, S-Ancial, Mumbai June 2025 – July 2025

- Built and deployed a stock market analysis platform for all listed companies in India.
- Created a product tree for all listed companies in India showing their forward and backward integrations using ReactFlow.
- Developed a Retrieval-Augmented Generation (RAG) pipeline that generated sales strategies by combining company data with insights from 100+ business/finance books.

Projects

Supermarket Database System

- Designed and implemented a database-backed supermarket management system handling product inventory, employee records, and checkout operations.
- Tools used: C#, .NET, Visual Studio, Microsoft SQL

Image Steganography for Information Hiding

- Built a client-server system to transmit sensitive files (PDFs, text) securely.
- Applied LSB-based steganography with RSA encryption to ensure confidentiality and integrity.

Smart Agricultural System

- Programmed an embedded system on LPC1768 to automate irrigation and fire detection.
- Integrated LM35, soil moisture, IR, and LDR sensors to trigger actuators for real-time, energy-efficient control.
- Tools: Embedded C, ARM Cortex-M3

Android App for Splitting Money

- Developed an Android app for expense tracking and group money splitting with UPI integration.
- Reduced transaction complexity by minimizing the number of required settlements.

Rubik's Cube Solver

- Implemented a solver for the 3×3 Rubik's Cube with automated solution visualization in 3D.

Technologies

Programming Languages: C, Embedded C, C#, Java, SQL, Python, R, NodeJS, React

Systems & Tools: Linux, Git, Packet Tracer, Airflow, AWS, MCP, Docker, LLM Workflows, GBQ

Databases & Frameworks: .NET, Microsoft SQL Server, Android Studio, Hadoop, PySpark, Kafka, HBase, Agentic AI, Kubernetes, Google Analytics, Service Now

Achievements

Awarded Scholar Scholarship at MIT, Manipal (merit-based distinction).
